SDG Goal 4 : Quality Education

Achieving career goals and progressing in career gives a sense of satisfaction to us. But the main problem is lack of proper guidance to select a career that is in tune with their skills and their job expectations. Students are restricted by options that they know or listen from their well wishers.with the help of career counselling, most candidates end up choosing the right **career**, and perform their level best, which ultimately helps them succeed.

Existing Solution:

There is an website called "Open Colleges " , it is an online vocational education organisation based in Australia. They offer flexible online courses that allow us to fit study around our lifestyle.

- They are showing what to do but not how to do.
- They are not showing the path of which career to choose.
- Their app is just limited to find the personality and giving suitable career options based on their personality quiz.
- It doesn't give any information about the colleges or entrance exams, fees and estimated time to reach the goal.

Proposed Solution

❖ A Map where nodes are career options and edges are estimated time (in days) to reach from one option to other option.

❖ Destination node can be obtained from individuals personality test or it can be searched.

❖ On selecting particular node, individual can find resources like top colleges and their locations, entrance exam information, estimated institute fees etc.

❖ Among all the paths to reach destination, we will highlight the **shortest path** to reach the goal.

❖ During SignUp individual can be tested on some personality questions which can reflects their career choices and their interest.

❖ Individual can give feedback also so that we can improve further.

Technologies :

Web Technologies

- Django
- Html + JavaScript + css

How to Evaluate our Solution?

- We can do survey with different age group students and take their feedback on various criteria like visibility, accessibility, design, content.
- We can compare our website with similar kind of website
